

Name: Alpanshu Kataria

Reg. No.: 18BCE1267

Subject: Data Visualization

Lab 1 (03/02/2021)

Code for normal plots:

```
rm(list=ls())
```

```
library(MASS)
```

```
newsurvey<- na.omit(survey)
```

#1. Plot a bar graph for the number of male and female participants in the survey. Provide the title as "Male and Female participants" and specify the colours for the bars.

```
gender<- newsurvey$Sex
```

```
gender_freq<- table(gender)
```

```
barplot(gender_freq,main="Male and Female participants",ylab="frequency",col=c('red',"blue"))
```

#2. Plot a bar graph for the number of left handers and right handers in the survey. Provide the title as "Left Handers and Right Hnaders" and specify the colours for the bars.

```
write_hand<- newsurvey$W.Hnd
```

```
write_hand_freq<- table(write_hand)
```

```
barplot(write_hand_freq,main="Left Handers and Right Handers",ylab="count",col=c('red',"blue"))
```

#3. Plot the distribution between male left handers and female left handers using bar chart. Provide the title as "Female Left Handers and Male Left Handers" and specify the colours for the bars.

```
left_hand=write_hand=="Left"

left_hand_data=newsurvey[left_hand,]

g <- left_hand_data$Sex

g_freq<- table(g)

barplot(g_freq,main="Female Left Handers and Male Left Handers",ylab="count",col=c('cyan',"green"))
```

#4. Draw the distribution of smoking habits of male left handers using pie chart.

```
male_left_hand<- left_hand_data$Sex=="Male"

male_left_hand_data<- left_hand_data[male_left_hand,]

smk<- male_left_hand_data$Smoke

smk_freq<- table(smk)

pie(smk_freq,main="Distribution of smoking habits of male left handers",col=c('red','magenta','cyan',"green"))
```

#5. Draw the histogram of age distribution with the title as 'Age distribution' and xlabel as 'Age range' and ylabel as 'frequency'.

```
age_rg<- newsurvey$Age

hist(age_rg,main='Age distribution',right=FALSE,xlab='Age range',ylab='frequency')
```

#6. Reveal the relationship between writing hand span and the age using scatter plot.

```
write_hand_span<- newsurvey$Wr.Hnd

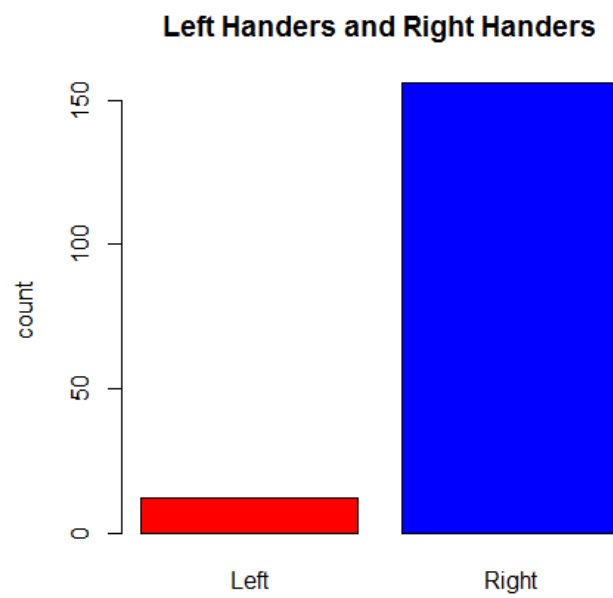

plot(write_hand_span,age_rg,main="Relationship between writing hand span and the age")
```

#7. Draw the boxplot for pulse rate and analyse the five summary statistics.

```
pr<- newsurvey$Pulse
```

```
boxplot(pr,main="Box plot for Pulse rate",ylab="Pulse rate")
```

Outputs:

Female Left Handers and Male Left Handers

Distribution of smoking habits of male left handers

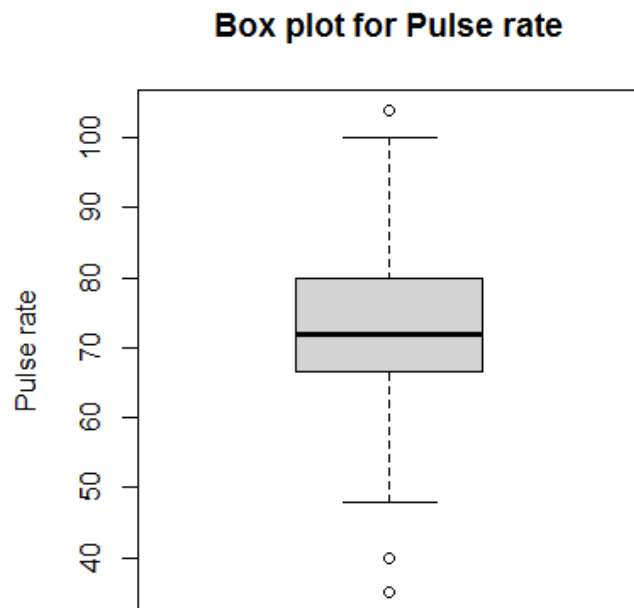

Age distribution

Relationship between writing hand span and the age

Code for ggplot2 plots:

```
rm(list=ls())
```

```
library(MASS)
```

```
library(ggplot2)
```

```
newsurvey<- na.omit(survey)
```

#1. Plot a bar graph for the number of male and female participants in the survey. Provide the title as "Male and Female participants" and specify the colours for the bars.

```
gender<- newsurvey$Sex
```

```
gender_freq<- table(gender)
```

```
ggplot(data=newsurvey,mapping=aes(x=Sex,fill=Sex))+geom_bar()+ggtitle("Male and Female participants")
```

#2. Plot a bar graph for the number of left handers and right handers in the survey. Provide the title as "Left Handers and Right Hnaders" and specify the colours for the bars.

```
write_hand<- newsurvey$W.Hnd
```

```
ggplot(data=newsurvey,mapping=aes(x=W.Hnd,fill=W.Hnd))+geom_bar()+scale_fill_manual(values = c("red", "green"))+ggtitle("Left Handers and Right Hnaders")
```

#3. Plot the distribution between male left handers and female left handers using bar chart. Provide the title as "Female Left Handers and Male Left Handers" and specify the colours for the bars.

```
left_hand=write_hand=="Left"
```

```
left_hand_data=newsurvey[left_hand,]
```

```
ggplot(data=left_hand_data,mapping=aes(x=Sex,fill=Sex))+geom_bar()+scale_fill_manual(values = c("red", "green"))+ggtitle("Female Left Handers and Male Left Handers")
```

#4. Draw the distribution of smoking habits of male left handers using pie chart.

```
male_left_hand<- left_hand_data$Sex=="Male"
```

```
male_left_hand_data<- left_hand_data[male_left_hand,]
```

```
ggplot(data=male_left_hand_data,aes(x="",y=Sex,fill=Smoke))+geom_bar(stat="identity",width=1, color="White")+coord_polar("y", start=0)+ggtitle("smoking habits of male left handers")+theme_void()
```

#5. Draw the histogram of age distribution with the title as 'Age distribution' and xlabel as 'Age range' and ylabel as 'frequency'.

```
ggplot(newsurvey, aes(x=Age)) + geom_histogram(binwidth=5, fill="#69b3a2", color="#e9ecef", alpha=0.9)+labs(y= "Frequency", x = "Age Range")+ggtitle("Age distribution")
```

#6. Reveal the relationship between writing hand span and the age using scatter plot.

```
write_hand_span<- newsurvey$Wr.Hnd
```

```
ggplot(newsurvey, aes(x=Wr.Hnd, y=Age)) + geom_point()
```

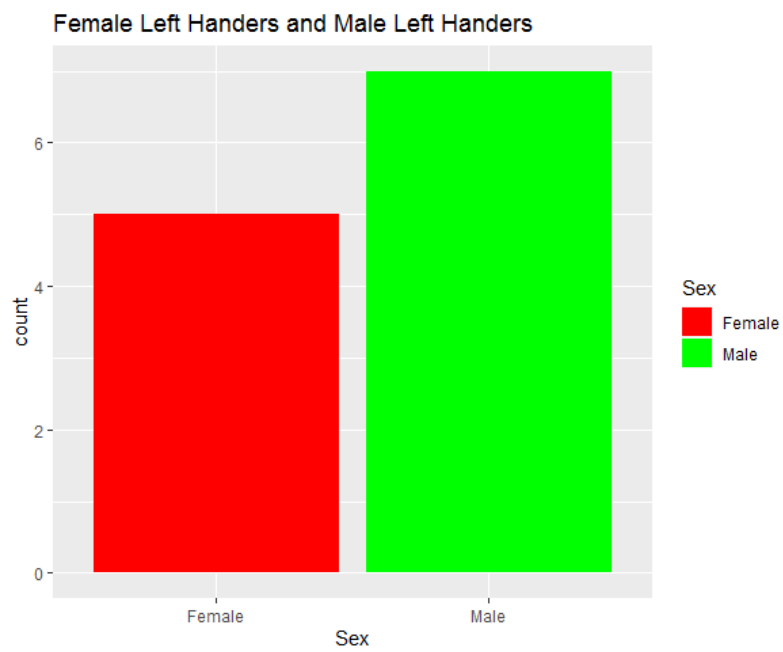

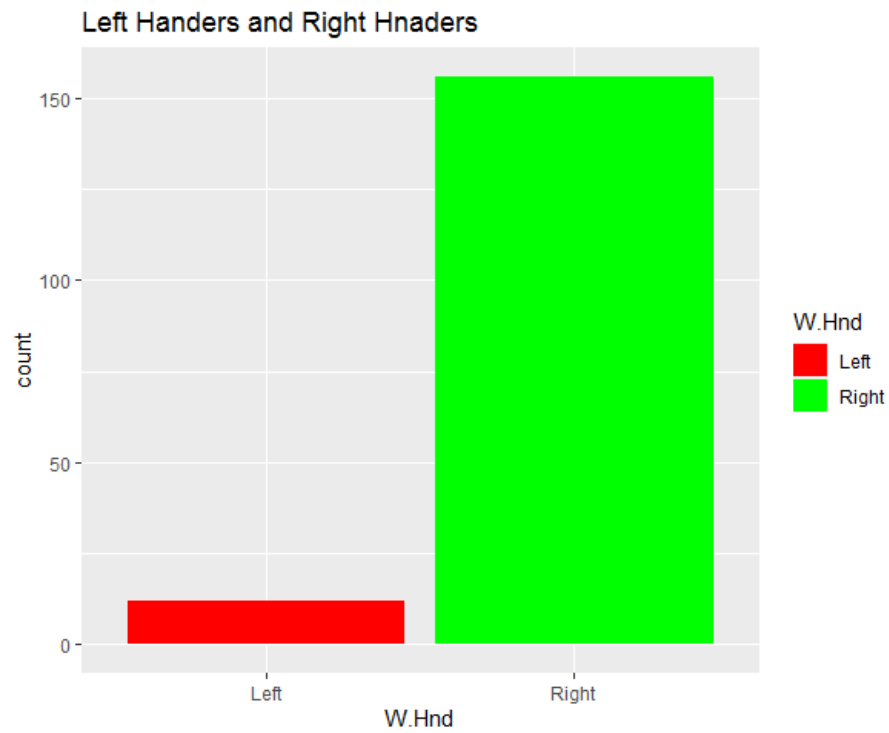

#7. Draw the boxplot for pulse rate and analyse the five summary statistics.

```
pr<- newsurvey$Pulse
```

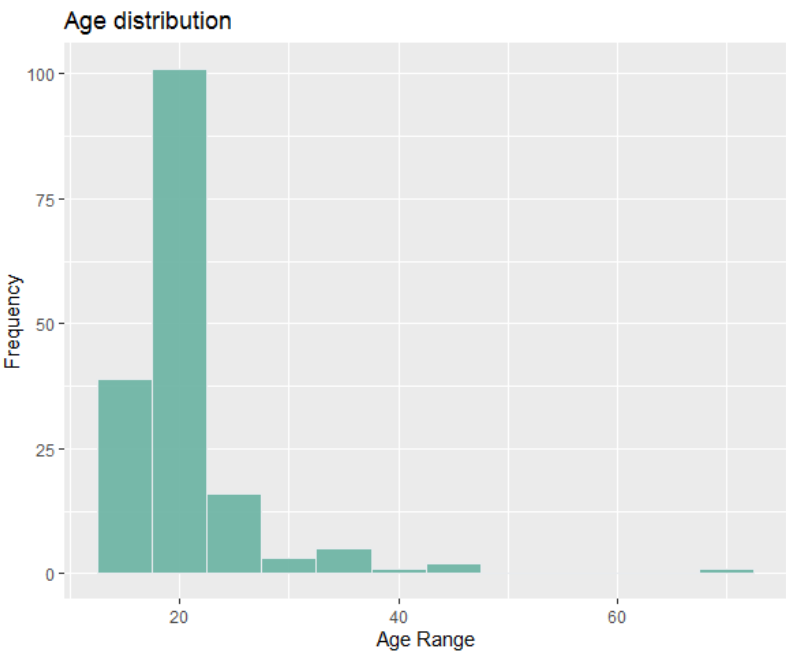

```
ggplot(newsurvey, aes(y=Pulse, fill=Pulse)) + geom_boxplot(fill="slateblue", alpha=0.2) +  
ylab("Pulse Rate")
```

Output:

smoking habits of male left handers

Code for plotting a different dataset(Iris dataset):

```
rm(list=ls())
```

```
library(MASS)
```

```
library(ggplot2)
```

```
newdata<- na.omit(iris)
```

```
ggplot(data=newdata,mapping=aes(x=Species,fill=Species))+geom_bar()+ggtitle("Diff types of species")
```

```
hist(iris$Sepal.Width, freq=NULL, density=NULL, breaks=12,xlab="Sepal Width",  
ylab="Frequency", main="Histogram of Sepal Width")
```

```
set.seed(1234)
```

```
iris1 <- iris[sample(1:nrow(iris), 110), ]
```

```
pie <- ggplot(iris1, aes(x=factor(1), fill=Species)) +geom_bar( width=1, color="White") +  
labs(x="", y="")+theme_void()
```

```
pie + coord_polar(theta="y")
```

```
scatter <- ggplot(data=iris, aes(x = Sepal.Length, y = Sepal.Width))
```

```
scatter + geom_point(aes(color=Species, shape=Species)) +xlab("Sepal Length") + ylab("Sepal  
Width") +ggtitle("Sepal Length-Width")
```

```
boxplot(Sepal.Length~Species,data=iris, xlab="Species", ylab="Sepal Length", main="Iris Boxplot")
```

Output:
